CFM500S Series Application Note V11

1. Introduction

This application note describes the features and functions of Cincon's CFM500S series of open frame, switching AC-DC power module. These are highly efficient, reliable, compact, high power density, single output AC/DC power modules. The module is fully protected against short circuit and over-voltage conditions. Cincon's world class automated manufacturing methods, together with an extensive testing and qualification program, ensure that the CFM500S series power module is extremely reliable.

2. Electrical Block Diagram

Application Note V11

3. Main Features and Functions

3.1 Operating Temperature Range

The highly efficient design of Cincon's CFM500S series power modules has resulted in their ability to operate within ambient temperature environments from -40°C to 85°C. Due consideration must be given to the de-rating curves when ascertaining the maximum power that can be drawn from the module. The maximum power which can be drawn is influenced by a number of factors, such as

- Input voltage range
- Permissible output load (per derating curve)
- Effective heat sinks

3.2 Output Protection (Over Current Protection)

The power modules provide full continuous short-circuit protection. The unit will auto recover once the short circuit is removed. To provide protection in a fault condition, the unit is equipped with internal over-current protection. The unit will operate normally once the fault condition is removed. The power module will go to hiccup mode if the output current is set from 110% to 180% of rated current.

4. Applications

4.1 Test Set-Up

The basic test set-up to measure parameters such as efficiency and load regulation is shown in Figure 1. When testing the Cincon's CFM500S series under any transient conditions, please ensure that the transient response of the source is sufficient to power the equipment under test. We can calculate the

- Efficiency
- Load regulation and line regulation.

The value of efficiency is defined as:

$$\eta = \frac{Vo \times Io}{Pin} \times 100\%$$

Where:

Vo is output voltage lo is output current Pin is input power

The value of load regulation is defined as:

Load reg. =
$$\frac{V_{FL} - V_{NL}}{V_{NL}} \times 100\%$$

Where:

 V_{FL} is the output voltage at full load V_{NL} is the output voltage at 10% load

The value of line regulation is defined as:

$$Line \ reg. = \frac{V_{HL} - V_{LL}}{V_{LL}} \times 100\%$$

Where:

 V_{HL} is the output voltage of maximum input voltage at full load.

 V_{LL} is the output voltage of minimum input voltage at full load.

Figure 1. CFM500S Series Test Setup

4.2 Output Ripple and Noise Measurement

The test set-up for noise and ripple measurements is shown in Figure 2. Measured method:

Add a C2=0.1uF ceramic capacitor and a C1=10uF electrolytic capacitor to output at 20 MHz Band Width.

Application Note V11

4.3 Installation Instruction

The CFM500S series has four 4mm diameter mounting holes. There are three type installations for CFM500S. Please use the mounting holes as follows:

Insert the spacer (4mm diameter max.) of 8mm height or more to mount the unit.

M3*0.5 through 4pl

Height or more than 8mm spacer

The CFM500S series provide the baseplate cooling for customer to increasing heat dissipation. Please refer to the following figure for installation.

CFM500SXXXC Installation Diagram

Application Note V11

CFM500SXXXC installation diagram

Note: M3 & M4 screw head and washer diameter shall not exceed 5.5mm.

The torque of CFM500S series as follows:

The torque of output connectors are 7kgf-cm and the connectors mate with round terminal. The maximum outer diameter of the terminal is 8.0mm and the maximum inner diameter is 4.3mm. When locking the round terminal or Y terminal to output connectors, the terminals should not touch other parts to avoid short.

Please allow 4mm side clearance from the components and all side of the PCB. Allow 5mm clearance above the highest parts on the PCB. Be especially careful to allow 5mm between the solder side of the PCB and the mounting surface. If the clearances are not sufficient the specifications for isolation and withstand will not be valid.

FG should be connected to the earth (ground) terminal of the apparatus. If not the conducted noise and output noise will increase.

Application Note V11

M3 Screw

4.4 External Baseplate Cooling

The CFM500S series provide the baseplate cooling for customer to increasing heat dissipation. For example, adding a 480mm*248mm*1.2mm heatsink at the bottom of CFM500S, between the heatsink and CFM500S with thermal grease to help heating ability.

Please refer to the following figure for installation. When the CFM500S series uses an external baseplate cooling solution, it can be used at $470 \sim 500$ W. Please refer to the power derating curve in the specification.

M3 Washer M3x0.5 480x248x1.2mm

CFM500SXXXC installation diagram

4.5 PS On/Off Remote Control and Fan Control

The PS-ON remote control is provided in CN3 pin 4. The diagram and control function are shown as follow:

Power On: VPS-ON≦2V, IPS-ON≧10mA (PS-ON and GND short, IPS-ON =10 mA typical). Power Off: Open circuit, VPS-ON =4V.

The fan control is provided in CN3 pin 3. The control function and diagram are shown as follow:

Fan On: $V_{FAN-EN} \ge 1V$. Fan Off: Open circuit, $V_{FAN-EN} = 0V$.

CFM500S Series

When the PS On/Off remote-control function is not used, connect a short circuit between the pin PS-ON and FAN-EN.

Application Note V11

4.8 Mating Connectors

4.6 Output Remote Sensing

The CFM500S SERIES converter has the capability to remotely sense both lines of its output. This feature moves the effective output voltage regulation point from the output of the unit to the point of connection of the remote sense pins. This feature automatically adjusts the real output voltage of the CFM500S series in order to compensate for voltage drops in distribution and maintain a regulated voltage at the point of load. The remote-sense voltage range is:

 $[(+V_{out}) - (-V_{out})] - [(+Sense) - (-Sense)] \leq 5\% \text{ of } V_{o_nominal}$ If the remote sense feature is not to be used, the sense pins should be connected locally. The +Sense pin should be connected to the +Vout pin at the module and the -Sense pin should be connected to the -Vout pin at the module. A Remote Sensing is provided in CN3. This is shown in the schematic as below.

4.7 EMI Test

The CFM500S series Conductive EMI meets EN55032, FCC Part 15 Class B when test condition is Class I.

- CN1: Input connector wafer with JST VH series and mate with JST housing VHR series or equivalent. Optional Input connector wafer with LONG CHU P3161 series and mate with LONG CHU H3060 series or equivalent.
- CN2: Output connector wafer with TAIWAN KING PIN TERMINAL P110I series and mate with JST housing PH series or equivalent.
- CN3: Output connector wafer with JST PH series and mate with JST housing PH series or equivalent.
- Vo+ & Vo-: Output connectors mate with round terminal and round terminal of the max outer diameter is 8.0mm, max inner diameter is 4.3mm.

Application Note V11

5. Packing Information

The packing information for CFM500SXXX is showing as follows:

ITEM	PART NO.	NAME	OUTSIDE DIM(mm)	PCS
1		CFM500SXXX Product	127x76.2x39.1	25
2	G64205245	Inner Box	140x100x55	25
3	G64F00005	Antistatic Bag	(110+60)x165	25
4	G64112325	No.146 Cardboard Box	525x155x300	1

Each Box Packaging 25 PCS Products Gross weight Ref. 14.5 Kg

The packing information for CFM500SXXXC is showing as follows:
