### **Application Note V12 November 2018**

#### 1. Introduction

The ECLB40W series offer 40 watts of output power in a 2.05x1.20x0.4 inches copper packages. The ECLB40W series has a 4:1 wide input voltage range of 9-36 and 18-75VDC, and provides a precisely regulated output. This series has features such as high efficiency, 1500VDC of isolation and allows an ambient operating temperature range of -40°C to 85°C (de-rating above 60 °C). The modules are fully protected against input UVLO (under voltage lock out). output over-current. over-voltage and over-temperature and short circuit conditions. Furthermore, the standard control functions include remote on/off and adjustable output voltage. All models are very suitable for distributed power architectures, telecommunications, battery operated equipment and industrial applications.

#### 2. DC-DC Converter Features

- \* 40W Isolated Output
- \* Efficiency to 91%
- \* 2.05" X1.2 X0.4" Six-Sided Shield Metal Case
- \* 4:1 Input Range
- \* Regulated Outputs
- \* Fixed Switching Frequency
- \* Low No Load Power Consumption
- \* Input Under Voltage Protection
- \* Over Current Protection
- \* Remote On/Off
- \* Continuous Short Circuit Protection
- \* No Tantalum Capacitor Inside
- \* Safety Meets UL60950-1, EN60950-1, and IEC60950-1

### **Application Note V12 November 2018**

#### 5. Main Features and Functions

#### 5.1 Operating Temperature Range

The ECLB40W series converters can be operated by a wide ambient temperature range from -40°C to  $85^{\circ}$ C (de-rating above  $60^{\circ}$ C). The standard model has a copper case and case temperature can not over  $105^{\circ}$ C at normal operating.

#### 5.2 Remote On/Off

The remote on/off input feature of the converter allows external circuitry to turn the converter on or off. Active-high remote on/off is available as standard. The converter is turned on if the remote on/off pin is high (>3.5Vdc to 75Vdc or open circuit). Setting the pin low (0 to <1.2Vdc) will turn the converter 'Off'. The signal level of the remote on/off input is defined with respect to "-Vin". If not using the remote on/off pin, leave the pin open (module will be on).

#### 5.3 UVLO (Under Voltage Lock Out)

Input under voltage lockout is standard on the ECLB40W unit. The unit will shut down when the input voltage drops below a threshold, and the unit will operate when the input voltage goes above the upper threshold.

#### 5.4 Over Current Protection

All models have internal over current and continuous short circuit protection. The unit operates normally once the fault condition is removed. At the point of current limit inception, the converter will go into hiccup mode protection.

#### 5.5 Over Voltage Protection

The over-voltage protection consists of a zener diode to limiting the out voltage.

#### 5.6 Over-Temperature Protection (OTP)

The ECLB40W series converters are equipped with non-latching over-temperature protection. If the temperature exceeds a threshold of 110°C (typical) the converter will shut down, disabling the output. When the temperature has decreased the converter will automatically restart. The over-temperature condition can be induced by a variety of reasons such as external overload condition or a system fan failure.

#### 5.7 Output Voltage Adjustment

Section 6.6 describes in detail how to trim the output voltage with respect to its set point. The output voltage on all models is adjustable within the range of +10% to -10%. (Single output models only)

### 6. Applications

# 6.1 Recommended Layout PCB Footprints and Soldering Information

The system designer or the end user must ensure that other components and metal in the vicinity of the converter meet the spacing requirements to which the system is approved. Low resistance and low inductance PCB layout traces are the norm and should be used where possible. Due consideration must also be given to proper low impedance tracks between power module, input and output grounds. The recommended footprints and soldering profiles are shown below.

Note: Dimensions are in inches (millimeters)

Lead Free Wave Soldering Profile

#### Note:

- 1. Soldering Materials: Sn/Cu/Ni
- 2. Ramp up rate during preheat: 1.4  $^{\circ}\text{C/Sec}$  (From 50  $^{\circ}\text{C}$  to 100  $^{\circ}\text{C}$  )
- 3. Soaking temperature: 0.5  $^{\circ}$ C/Sec (From 100 $^{\circ}$ C to 130 $^{\circ}$ C), 60±20 seconds
- 4. Peak temperature: 260°C, above 250°C 3~6 Seconds
- 5. Ramp up rate during cooling: -10.0 °C/Sec (From 260°C to 150°C)

### 6.4 Efficiency vs. Load Curves

### **Application Note V12 November 2018**

#### 6.5 Input Capacitance at the Power Module

The converters must be connected to low AC source impedance. To avoid problems with loop stability source inductance should be low. Also, the input capacitors (Cin) should be placed close to the converter input pins to de-couple distribution inductance. However, the external input capacitors are chosen for suitable ripple handling capability. Low ESR capacitors are good choice. Circuit as shown in Figure 5 represents typical measurement methods for reflected ripple current. C1 and L1 simulate a typical DC source impedance. The input reflected-ripple current is measured by current probe to oscilloscope with a simulated.

source Inductance (L1).

L1: 12uH C1: None

Cin: 33uF ESR<0.7ohm @100KHz

Figure 5 Input Reflected-Ripple Test Setup

#### 6.6 Test Set-Up

The basic test set-up to measure parameters such as efficiency and load regulation is shown in Figure 6. When testing the modules under any transient conditions please ensure that the transient response of the source is sufficient to power the equipment under test. We can calculate the

- Efficiency
- · Load regulation and line regulation.

The value of efficiency is defined as:

$$\eta = \frac{V_O \times I_O}{V_{IN} \times I_{IN}} \times 100\%$$

Where

V<sub>O</sub> is output voltage,

Io is output current,

V<sub>IN</sub> is input voltage,

I<sub>IN</sub> is input current.

The value of load regulation is defined as:

$$Load.reg = \frac{V_{FL} - V_{NL}}{V_{NI}} \times 100\%$$

Where

 $V_{\text{FL}}$  is the output voltage at full load  $V_{\text{NL}}$  is the output voltage at 10% load

The value of line regulation is defined as:

$$Line.reg = \frac{V_{HL} - V_{LL}}{V_{LL}} \times 100\%$$

Where

 $V_{\text{HL}}$  is the output voltage of maximum input voltage at full load.

 $\ensuremath{V_{\text{LL}}}$  is the output voltage of minimum input voltage at full load.

Figure 6 ECLB40W Series Test Setup

### 6.7 Output Voltage Adjustment

In order to trim the voltage up or down one needs to connect the trim resistor either between the trim pin and -Vo for trim-up and between trim pin and +Vo for trim-down. The output voltage trim range is  $\pm 10\%$ . (Single output models only) This is shown in Figure 7 and 8:

Figure 7 Trim-up Voltage Setup

Figure 8 Trim-down Voltage Setup

### **Application Note V12 November 2018**

#### 1. The value of R<sub>trim-up</sub> defined as:

$$R_{trim-up} = \left(\frac{V_r \times R1 \times (R2 + R3)}{(V_O - V_{O,nom}) \times R2}\right) - Rt \text{ (K}\Omega)$$

#### Where

 $R_{\text{trim-up}}$  is the external resistor in Kohm.  $V_{O, \text{nom}}$  is the nominal output voltage.  $V_{O}$  is the desired output voltage. R1, Rt, R2, R3 and Vr are internal to the unit and are defined in Table 1.

Table 1 - Trim up and Trim down Resistor Values

| Model Number                 | Output<br>Voltage(V) | R1<br>(KΩ) | R2<br>(KΩ) | R3<br>(KΩ) | Rt<br>(KΩ) | Vr<br>(V) |
|------------------------------|----------------------|------------|------------|------------|------------|-----------|
| ECLB40W24S33<br>ECLB40W48S33 | ` ' ' ' ' '          | 2.74       | 1.8        | 0.27       | 9.1        | 1.24      |
| ECLB40W24S05<br>ECLB40W48S05 | 50                   | 2.32       | 2.32       | 0          | 8.2        | 2.5       |
| ECLB40W24S12<br>ECLB40W48S12 | コンハ                  | 6.8        | 2.4        | 2.32       | 22         | 2.5       |
| ECLB40W24S15<br>ECLB40W48S15 | 15.0                 | 8.06       | 2.4        | 3.9        | 27         | 2.5       |

For example, to trim-up the output voltage of 5.0V module (ECLB40W-24S05) by 10% to 5.5V, R trim-up is calculated as follows:

$$V_o - V_{o, nom} = 5.5 - 5.0 = 0.5V$$

R1 = 2.32 KΩ

 $R2 = 2.32 \text{ K}\Omega$ 

 $R3 = 0 K\Omega$ 

Rt =  $8.2 \text{ K}\Omega$ , Vr= 2.5 V

 $R_{trim-up} = (\frac{2.5 \times 2.32 \times (2.32 + 0)}{0.5 \times 2.32}) - 8.2 = 3.4(K\Omega)$ 

#### 2. The value of R<sub>trim-down</sub> defined as:

$$R_{trim-down} = R1 \times \left(\frac{Vr \times R1}{(V_{o,nom} - V_{o}) \times R2} - 1\right) - Rt \text{ (K}\Omega)$$

#### Where

 $R_{\text{trim-down}}$  is the external resistor in Kohm.  $V_{O, \text{ nom}}$  is the nominal output voltage.  $V_{O}$  is the desired output voltage. R1, Rt, R2, R3 and Vr are internal to the unit and are defined in Table 1

For example, to trim-down the output voltage of 5.0V module (ECLB40W-12S05) by 10% to 4.5V, R trim-down is calculated as follows:

$$V_{O,nom} - V_0 = 5.0 - 4.5 = 0.5V$$

 $R1 = 2.32 \text{ K}\Omega$ 

 $R2 = 2.32 \text{ K}\Omega$ 

 $R3 = 0 K\Omega$ 

Rt =  $8.2 \text{ K}\Omega$ 

 $R_{trim-down} = 2.32 \times (\frac{(2.5 \times 2.32)}{0.5 \times 2.32} - 1) - 8.2 = 1.08 \text{ (K}\Omega)$ 

#### 6.8 Output Ripple and Noise Measurement

The test set-up for noise and ripple measurements is shown in Figure 9. A coaxial cable was used to prevent impedance mismatch reflections disturbing the noise readings at higher frequencies. Measurements are taken with output appropriately loaded and all ripple/noise specifications are from 5Hz to 20MHz bandwidth.

Note: C1: none

C2: 0.1uF ceramic capacitor

Figure 9 Output Voltage Ripple and Noise Measurement Set-Up

#### 6.9 Output Capacitance

The ECLB40W series converters provide unconditional stability with or without external capacitors. For good transient response low ESR output capacitors should be located close to the point of load. These series converters are designed to work with load capacitance to see technical specifications.

### **Application Note V12 November 2018**

### 7. Safety & EMC

### 7.1 Input Fusing and Safety Considerations.

The ECLB40W series converters have not an internal fuse. However, to achieve maximum safety and system protection, always use an input line fuse. We recommended a time delay fuse 6A for 24Vin models and 3A for 48Vin modules. Figure 10 circuit is recommended by a Transient Voltage Suppressor diode across the input terminal to protect the unit against surge or spike voltage and input reverse voltage.

Figure 10 Input Protection

#### 7.2 EMC Considerations

EMI Test standard: EN55022 Class A Conducted Emission Test Condition: Input Voltage: Nominal, Output Load: Full Load

Figure 11 Connection circuit for conducted EMI testing

| Model No.     | C1            | Model No.     | C1        |
|---------------|---------------|---------------|-----------|
| ECLB40W-24S33 | ECLB40W-24S33 |               |           |
| ECLB40W-24S05 |               | ECLB40W-48S05 |           |
| ECLB40W-24S12 | 100uF/50V     | ECLB40W-48S12 | 47uF/100V |
| ECLB40W-24S15 | ESR<0.17      | ECLB40W-48S15 | ESR<0.17  |
| ECLB40W-24D12 |               | ECLB40W-48D12 |           |
| ECLB40W-24D15 |               | ECLB40W-48D15 |           |
