Description

RCP-1U rack system is a power distribution solution utilizing the rack configuration with 1U low profile. Starting with a single unit of 1000W, RCP-1000 is the front end rectifier (or, power supply). With the active current sharing function, up to 3000W is able to be provided by 1 stack of the 19" rack mountable shelf RCP-1U and 8000W by 3 stacks. The design flexibility for system applications is ideally fulfilled by various built-in features, such as output programming, remote ON-OFF, auxiliary power, etc.

NOTE	<p>1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25℃ of ambient temperature.</p> <p>2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. Under parallel operation of more than one rack connecting together, ripple of the output voltage may be higher than the SPEC at light load condition. It will go back to normal ripple level once the output load is more than 10%. .</p> <p>3. Tolerance : includes set up tolerance, line regulation and load regulation.</p> <p>4. Derating may be needed under low input voltages. Please check the derating curve for more details.</p> <p>5. Output of all the RCP-1000 modules are connected in parallel in the rack.</p> <p>6. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 720mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com)</p> <p>7. The ambient temperature derating of 3.5℃/1000m with fanless models and of 5℃/1000m with fan models for operating altitude higher than 2000m(6500ft).</p> <p>※ Product Liability Disclaimer : For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx</p>						

Function Manual

1. Remote ON/OFF Control

The PSU can be turned ON/OFF together or separately by using the "Remote ON-OFF" function.

Between Remote ON-OFF and -S	Output
Switch Open	OFF
Switch Short	ON

2. Voltage Drop Compensation

2.1 Remote Sense

The remote sense compensates voltage drop on the load wiring up to 0.5V.

2.2 Local Sense

Notice : The +S, -S, on CN500 have to be connected to the +V, -V terminals locally in order to get the correct output voltage if the remote sensing is not used.

3. Output Voltage Programming (or, PV / remote voltage programming / remote adjust / margin programming / dynamic voltage trim)

(1) Output voltage can be trimmed between 90~110% of its rated value by the following method.

(2) +S & +V, -S & -V also need to be connected on CN500.

3.1 RCP-1000-12

3.2 RCP-1000-24

3.3 RCP-1000-48

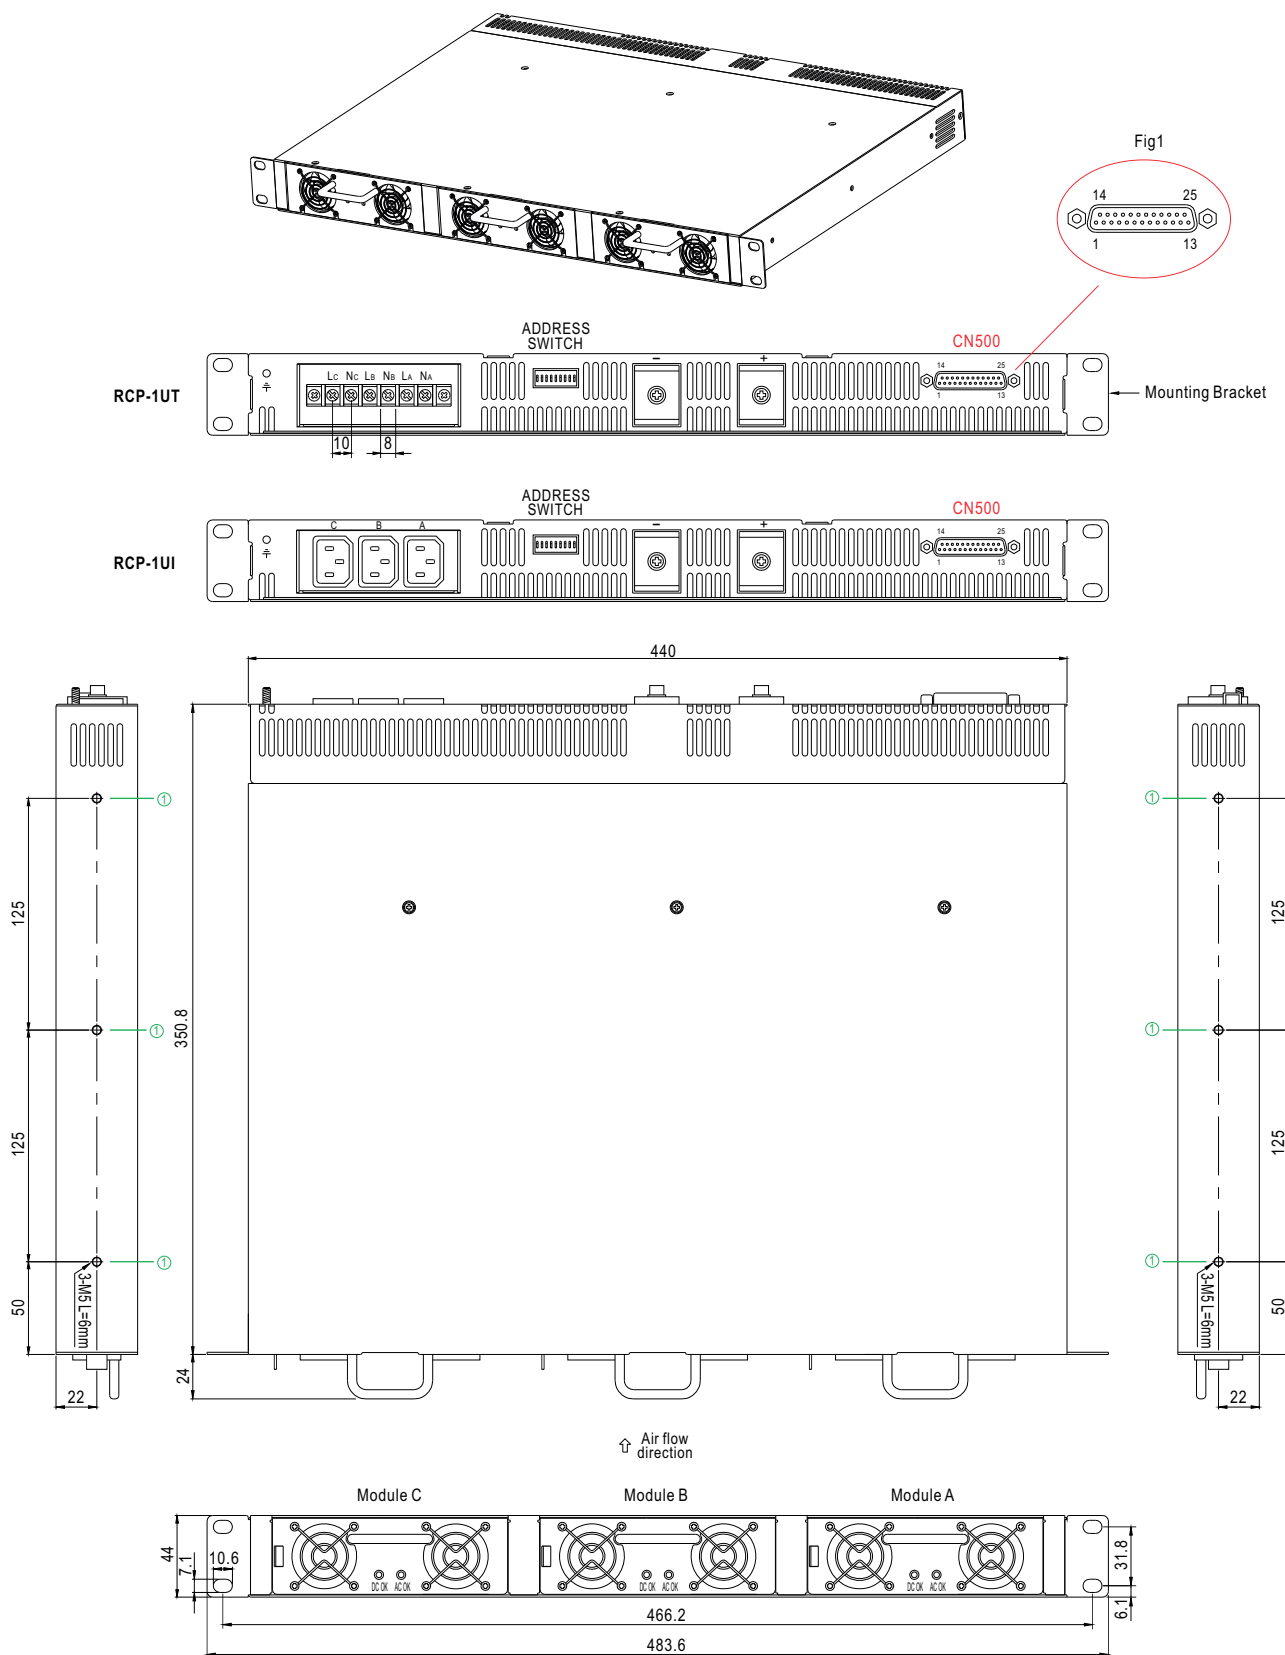

4. I²C Bus Interface

※ For the details of I²C bus used on this product, please refer to the Installation Manual.
